

Summer Camp Science Mysteries: In Search of the Fog Zombie

By Lynda Beauregard

Discuss

Talk through your thoughts.

- Think about a time you have seen fog. What was the environment like around you? What time of the year does fog occur in your area?
- Have you ever heard weird sounds you could not explain? How could you use science to explain the origin of the sounds?

Create

Make an experience of your own.

- Try the egg experiment on page 9. Did it work? What are some things you noticed while conducting this experiment?
- The characters in the story were following clues to find the “Fog Zombie”. Set up a hunt of your own and hide clues. Find some family members or friends to complete the hunt and follow the clues.

Imagine

Use your imagination to explore.

- With permission, try out more science experiments on pages 44 and 45.
- Check out more books in the *Summer Camp Science Mysteries* series listed on the back of the book.
